FUNCTION: RECEPTOR FOR CAMP. COORDINATES THE AGGREGATION
OF INDIVIDUAL CELLS INTO A MULTICELLULAR ORGANISM AND REGULATES
THE EXPRESSION OF A LARGE NUMBER OF DEVELOPMENTALLY REGULATED
GENES. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G PROTEINS.
SUBCELLULAR LOCATION: Integral membrane protein.
DEVELOPMENTAL STAGE: INDUCED AT EARLY AGGREGATION (6 HRS) AND
MAXIMALLY EXPRESSED AT THE MOUND STAGE (9-12HRS), LEVEL OF
PYDDERS(TON PEAKS AGAIN DURING THE SLUG STAGE (18HRS) AND DECLIN
                                                                                                                                                                                                                                                                                                                             PTM: CARBOXYL-TERMINAL SER OR THR RESIDUES MAY BE PHOSPHORYLATED. SIMILARITY: BELONGS TO FAMILY 5 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                  CAUTION: IT

Biol. Chem. 272:11812-11815(1997).

-I- FUNCTION: PHOSPHORYLATES THREONING IN THE C-TERMINAL TAIL REGION OF MYOSIN II HEAVY CHAIN. THIS PHOSPHORYLATION IS CRITICAL IN REGULARING THE ASSEMBLY AND DISASSEMBLY OF MYOSIN II FILAMENT.

-I- CATALYTIC ACTIVITY: ATP + [myosin heavy-chain] = ADP + [myosin heavy-chain] phosphate.

-I- DOMAIN: CONSISTS OF AN N-TERMINAL DOMAIN, A CENTRAL NONREPETITIV CATALYTIC DOMAIN, AND A C-TERMINAL DOMAIN WITH SEVEN WD REPEATS.

Natl. Acad. Sci. U.S.A. 93:15260-15265(1996).
-!- FUNCTION: INTERCELLULAR COMMUNICATION VIA TAGC MAY MEDIATE INTEGRATION OF CELLULAR DIFFERENTIATION WITH MORPHOGENESIS SIMILARITY).
-!- SIMILARITY: IN THE N-TERMINAL SECTION, BELONGS TO PEPTIDASE S8.
-!- SIMILARITY: IN THE C-TERMINAL SECTION, BELONGS TO THE ATP-E-SIMILARITY: IN THE C-TERMINAL SECTION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MEDLINE=97140317; PubMed=8986798;

-i- FUNCTION: Catalyzes the phosphorylation of phosphatidylinositol-3-
phosphate on the fifth hydroxyl of the myo-inositol ring, to form
phosphatidylinositol-4,5-biphosphate. Required for endocytic-
vacuolar pathway and nuclear migration. The product of the
reaction it catalyzes functions as an important regulator of
vacuole homeostasis perhaps by controlling membrane flux to and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDLINE=95400292; PubMed=7670463;

- PUNCTION: POSSIBLE OF THREE STRUCTURAL DOMAINS; A SMALL COMAIN: COMPOSED OF THREE STRUCTURAL DOMAINS; A SMALL COMPOSED OF THREE STRUCTURAL COILED COIL AND A INTERMINAL, A CENTRAL ALPHA-HELICAL COILED FOR THE MOTOR GLOBULAR C-TERMINAL WHICH IS RESPONSIBLE FOR THE MOTOR (IT HYDROLYZES ATP AND BINDS MICROTUBULES).

-!- SIMILARITY: BELONGS TO THE KINESIN-LIKE PROTEIN FAMILY.
                                                                                                                                                                                                                                   Motor protein; Microtubules;

-i- FUNCTION: Kinesin that supports microtubule movement in an dependent manner and has a minus-end directed polarity. Pl. crucial role in spindle morphogenesis in male Arabidopsis in ATK1 mutants, male meiosis is defective, producing an al number of microspores of variable sizes.

-i- DOMAIN: COMPOSED OF THREE STRUCTURAL DOMAINS; A SMALL GLOBING-TERMINAL, A CENTRAL ALPHA-HELICAL COLLED COIL AND A LARGI GLOBULAR C-TERMINAL WHICH IS RESPONSIBLE FOR THE MOTOR ACTION OF THE MICROTURBULES).

-i- SIMILARITY: BELONGS TO THE KINESIN-LIKE PROTEIN FAMILY. NCI
                                                                                                                                                                                                                                         Motor prot
